Our Commitment to Science Based Targets

At Quality Biological, Inc. (QBI), we are dedicated to sustainability and recognize the importance of taking proactive measures to protect the environment.

We are committed to reducing our Scope 1 and Scope 2 emissions by 42% by 2030 with a baseline year of 2022 in line with science maintaining a minimum absolute reduction of 4.2% year over year (YoY). We will do this through investments in energy conservation measures (ECMs) and renewable energy.

Beyond commitments we recognize the importance of transparent reporting and accountability. Therefore, we will continue to regularly report our progress on our emissions reduction efforts to our stakeholders, ensuring transparency and demonstrating our commitment to sustainability.

Sincerely,

President & CEO | Quality Biological, Inc.

Note: As of 2025, QBI has achieved its target of a 24% absolute reduction in energy consumption compared to the 2022 baseline year. This accomplishment reflects significant capital investments in energy conservation measures (ECMs), including insulation upgrades, lighting improvements, HVAC enhancements, evaporator fan optimization, and steam generator and boiler improvements.

Looking ahead, QBI will continue to track and evaluate its performance through internal monitoring and independent third-party energy audits. We remain committed to identifying additional opportunities to reduce our carbon footprint while supporting the continued growth and success of our business.
